Rule 1: The 1:1 Black Stone Ratio For general daily wear, limit black/root stones (Onyx, Tourmaline, Obsidian) to a maximum of one per trio. Reserve multi-black stacks exclusively for short-term cord-cutting or intense psychic defense to avoid energetic heaviness and apathy.	Rule 2: Anchor the Higher Chakras Never stack multiple upper-chakra stones (Lapis Lazuli, Blue Turquoise) without at least one Root or Solar Plexus anchor (Onyx, Tourmaline, Tiger's Eye). Unanchored upper-chakra stacks cause empathic sensory overload, brain fog, and spaciness.
Rule 3: Buffer the Transformative Catalysts Whenever wearing aggressive shadow-work or emotional cleansers (Malachite, Black Obsidian), always include a soothing stone (Blue Turquoise) or a structured stabilizer (Black Onyx, Tiger's Eye) to prevent emotional turbulence and volatility.	Rule 4: Harmonize Elemental Vectors Avoid pulling the energy body in divergent vertical extremes simultaneously (e.g., raw sacral heat + intense heart catharsis + detached third-eye intellect) without an integrative heart/throat bridge (Turquoise) or grounding stabilizer.

8. Physical Wear Considerations: Mohs Hardness Clashing & Material Preservation

Gemstone	Mineral Family	Mohs Hardness	Durability Tier	Physical Characteristics & Vulnerabilities
Black Tourmaline	Borosilicate (Schorl)	7.0 – 7.5	High (Durable)	Hard and highly resilient; can easily scratch softer stones (Coral, Malachite, Turquoise) upon contact.
Black Onyx	Chalcedony (Quartz)	6.5 – 7.0	High (Durable)	Tough cryptocrystalline structure; excellent everyday durability, resistant to scratches and household acids.
Tiger's Eye	Macro-Quartz	6.5 – 7.0	High (Durable)	Dense fibrous quartz; chatoyant sheen is tough and scratch-resistant against casual daily friction.
Blue Turquoise	Hydrous Phosphate	5.0 – 6.0	Medium-Soft (Porous)	Porous structure; easily scratched by quartz/tourmaline. Absorbs oils, sweat, and perfumes, altering color.
Black Obsidian	Volcanic Silica Glass	5.0 – 5.5	Medium (Brittle)	Natural glass with conchoidal fracture; prone to edge chipping and micro-flaking when banged against hard beads.
Lapis Lazuli	Metamorphic Aggregate	5.0 – 5.5	Medium (Granular)	Composite mineral with soft calcite veins; vulnerable to scratching from harder stones and degraded by acids.
Malachite	Copper Carbonate	3.5 – 4.0	Soft (Fragile)	Very soft; easily scratched by dust and harder beads. Polish dulls rapidly with friction or water/sweat exposure.
Red Coral	Organic Calcium Carbonate	3.0 – 4.0	Softest (Fragile)	Organic skeleton; extremely soft and vulnerable to abrasions, scratches, perspiration, and acidic degradation.

Severe Hardness Clashes (Abrasion Risks)

- **Tourmaline / Onyx / Tiger's Eye (Mohs 6.5–7.5) vs. Red Coral / Malachite (Mohs 3.0–4.0):** Direct bead-on-bead friction causes rapid erosion, micro-grooving, and irreversible loss of polish on soft beads.
- **Obsidian vs. Quartz/Tourmaline:** Glass chips easily along bead holes when rattling against dense 7.0 Mohs stones.

Stacking Protection & Care Protocol

- **Use Protective Spacers:** Insert smooth silicone o-rings, leather washers, wood beads, or knotting cords between disparate hardness levels to eliminate bead clashing.
- **Split Wrist Placement:** Wear delicate stones (Coral, Malachite, Turquoise) on the receptive/left wrist and durable stones (Tourmaline, Onyx, Tiger's Eye) on the active/right wrist.
- **Chemical Shielding:** Never expose Turquoise or Coral to perfumes, lotions, or chlorine; clean only with a damp microfiber cloth.
